

Name: Yun Jiang, PhD, MS, RN, FAMIA

Current Title: Assistant Professor

Affiliation: University of Michigan

Candidate for: MNRS Board Director-At-Large

Personal Statement:

I am a nursing scientist with multidisciplinary training in health informatics, nursing, and gerontology. My program of research is focused on informatics- and data-driven solutions for health self-management in vulnerable populations. MNRS has been my home community since I became a faculty member at the University of Michigan in 2017. I always enjoy engaging in our community services. I feel rewarded for helping with the review of abstract submissions, student posters, and grants, being the co-chair elect and co-chair of our Health System, Policy, and Informatics RIIG. I was very honored for being selected as the awardee of the 2020 MNRS Seed Grant. I appreciate all the support I received from our MNRS community and want to make my significant contributions to keep our community growing. I would like to promote and advance the training of our future nursing scientists to lead multidisciplinary collaborations. I have served on a few education and training workgroups and committees before, such as the Institute of Healthcare Policy and Innovation (IHPI) Education and Training workgroup at the U-M, and the Education Committee at the American Medical Informatics Association (AMIA). I also have personal experience of leading multidisciplinary collaborative research. I will look forward to serving as the Board Member-at-Large to support our members and the progress of our community.
